

Carbon Monoxide Installation Outreach

Resurrection Lutheran Church, ELCA in Godfrey has partnered with the Godfrey Fire Protection District, the Alton Fire Department, and Boy Scout Troop 7 to help address a public safety need in the communities of Godfrey and Alton. To provide access to life-saving home safety devices, volunteers install new 10-year UL-Listed carbon monoxide detectors in pre-approved homes. Homeowners may provide batteries for volunteers to replace in existing smoke alarms, if time allows.

Our primary goal is to support our local fire departments in their commitment to public safety. To raise awareness about fire prevention, fire scape planning, home fire safety, and to ensure homeowners have properly functioning smoke alarms, referrals to the local fire department may be provided.

To qualify, the applicant must be a homeowner living in Alton or Godfrey. Nearby communities will be considered on an individual basis. Priority is given to seniors, people with disabilities and homeowners who are low income.

If you or you know of a family member, friend, or neighbor with limited income and they are unable to purchase their own, you are encouraged to refer them to this free community service program by sending us their name and address to: nofire4us@gmail.com. This appeal also applies to homeowners with physical or medical limitations.

Monetary donations are always welcomed and appreciated.

- Carbon monoxide detectors are 100% funded by donations.
- Installation events are scheduled quarterly.
- Qualified applicants are notified by email or telephone to schedule their installation appointment.
